

# BUSINESS INCUBATOR CONFIGURATION IN JÁSZKISÉR

TOP-1.1.2-16-JN1-2017-00001

## Business incubator configuration in Jászkisér

The Local Government of Jászkisér handed in a support application to the Region and City Development Operative Program. After the success of this application, the renewal of a run-down and function-lost building could be begun out of a 193 million HUF non-reimbursable grant. The aim of this project was not only to maintain an innovative complex in aspect of aesthetics and energetics in the center of Jászkisér, but to provide a service which is eligible for present-day demands. Led by these purposes, the Local Government developed five offices, which can be used by contractors, civils, or other service providers. Every office has a sanitary unit to satisfy the users' demands as much as possible. The lobby of the old cinema has been transferred into a modern entertainment hall, which is suitable for organizing art events, film projections, concerts, or other kinds of cultural and sport programs, too. Providing equal opportunity, the building became barrier-free, the built-in material is eligible for present-day requirements. The heating is run by a heat-pump system, whose heat source is provided by thermal water as in all the other public institutions in Jászkisér. The consumption of green energy represents eco-conscious thinking and sustainable development, which the City Council also stands for. The secondary aim of the project is to improve inhabitants' comfort and to expand the city's facilities. All the above strengthens the identity of Jászkisér's locals in order to be worth living and planning future here.
